LinkedIn: linkedin.com/in/ena-nansera-a4bb18253 | GitHub: github.com/Nanseraena

PROFESSIONAL SUMMARY

Passionate and mission-driven Software Developer with strong experience in React.js and modern web technologies. Adept at translating Figma designs into scalable, accessible UI components using TypeScript, Next.js, and React. Proven ability to work in agile environments, integrate with backend APIs, and deliver enterprise-grade digital solutions. Brings a self-starter mindset, clean code practices, and strong commitment to continuous learning.

KEY SKILLS

Frontend: HTML5, CSS3 (Flexbox/Grid), JavaScript (ES6+), TypeScript, React.js, Next.js 15, React 19
State Management: Redux Toolkit, Redux Saga, React Query, TanStack Query, React Context — production experience
UI Design: Figma, Radix UI, Shadcn UI, Tailwind CSS, Responsive Design, Mobile-first Interfaces
Backend: Python (Django 5.2, DRF), PHP (Laravel), Celery + Redis, RESTful API design, Java
Databases: PostgreSQL (indexing, query optimisation, ACID compliance), MySQL, Firebase
Testing: Unit Testing (PHPUnit), Integration Testing, Postman — 95% coverage on payment workflows
DevOps & Tools: Git, GitHub, GitLab, Docker, Docker Compose, CI/CD Pipelines, Swagger, Postman
Mobile: Flutter, Firebase Auth, React Native, REST API and payment gateway integration
Soft Skills: Collaboration, Problem Solving, Communication, Self-Discipline, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Developer (Fullstack)
December 2025 – August 2026

Baisoft Global | Kampala, Uganda

Contributed to two enterprise-scale software platforms — a Task Management ERP System and EDUMAS (Educational Management System) — built on Next.js 15, React 19, TypeScript, Django 5.2, and PostgreSQL.

- Designed, developed, and maintained scalable software components following clean code principles and component-driven architecture, demonstrating full software development lifecycle participation.
- Built and maintained REST API integrations between Next.js frontends and Django REST Framework backends, standardising data contracts with IPaginatedResponse<T> typing for reliable, documented API consumption.
- Engineered a custom usePersistentState React hook (sessionStorage-based) to solve user experience data loss during navigation, demonstrating initiative and problem-solving ability.
- Implemented SearchableMultiSelect components with client-side filtering, reducing server API payload and improving system performance.
- Refactored complex legacy UI systems into reusable, maintainable component libraries using Radix UI and Tailwind CSS, improving codebase scalability and reducing technical debt.
- Diagnosed and resolved critical API fetching bottlenecks and network errors across core platform modules (Rules & Settings, Schedules, Library).
- Participated in full agile/scrum delivery cycles including sprint planning, daily stand-ups, and retrospectives, collaborating with backend engineers, designers, and product stakeholders.
- Documented components, API contracts, and technical decisions for team knowledge sharing and future maintainability.

UI/UX Designer & Frontend Developer
July 2024 – October 2024

YMCA Institute Uganda | Kampala, Uganda

- Translated Figma designs into responsive React.js components using HTML, CSS, and JavaScript.
- Integrated frontend with backend APIs using Postman for endpoint testing and debugging.
- Assisted in designing MySQL schemas with a focus on ACID compliance and performance.
- Collaborated with cross-functional teams in weekly sprints to align design and development goals.

Software Developer
July 2023 – October 2023

Innovation Hub | Kampala, Uganda

- Developed and versioned RESTful APIs using Laravel and OAuth2 for the Turwa MICE platform.
- Optimised PostgreSQL queries and applied indexing to improve load performance by 25%.
- Dockerized Django-based services for local development and production deployment.
- Conducted unit and integration testing, achieving 95% test coverage on payment workflows.

PROJECTS

Task Management & Organisational ERP System – Baisoft Global

Next.js 15, React 19, TypeScript, Redux Toolkit, Redux Saga, Tailwind CSS, Radix UI, Django 5.2, PostgreSQL, Celery, Redis

- Architected a multi-module enterprise platform supporting project management, KPI/OKR tracking, multi-tenancy, resource allocation, and an integrated AI assistant, serving multiple organisations from a single deployment.
- Built a reusable typed component library including a generic PaginatedTable, SearchableMultiSelect with client-side filtering, and drag-and-drop task management, reducing development time for new modules significantly.
- Standardised all frontend-backend API contracts using IPaginatedResponse<T> typing, ensuring consistent data handling across every module and eliminating a class of runtime data errors.

EDUMAS — Educational Management System – Baisoft Global

Next.js 15, TypeScript, Shadcn UI, Tailwind CSS, Django 5.2, PostgreSQL, PgVector, Recharts, Celery, Redis

- Developed a comprehensive institutional management platform covering academics, library management, performance tracking, objectives, and resource modules, used by educational institutions for day-to-day operations.
- Engineered a custom usePersistentState React hook using sessionStorage to preserve filter states, search queries, and scroll positions across navigation, eliminating context loss and significantly improving power-user experience.
- Integrated Recharts to deliver interactive performance dashboards, giving administrators real-time visibility into institutional metrics and student outcomes.

Nasse Cleaning Services Platform – Personal Project

Next.js, TypeScript, Tailwind CSS, Redux Toolkit, TanStack Query, Django REST Framework, PostgreSQL | github.com/enanansera/Nasse-cleaning-services

- Built a full-stack service-booking platform enabling customers to discover cleaning services, check coverage areas, upload property images for personalised quotations, and manage bookings online, with end-to-end ownership from architecture to deployment.
- Implemented secure JWT-based customer authentication, a quotation request and approval workflow, service-area management, and a full administrative dashboard for managing services, quotes, and customer requests.

RouteWise — Dynamic Route Optimisation System – Makerere University

React Native, Django, PostgreSQL, PostGIS, Machine Learning, REST APIs | github.com/walnatum/routewise-ml

- Developed an AI-powered school transportation platform using ML algorithms to dynamically optimise bus routes based on real-time traffic, weather patterns, and road conditions, achieving a 12-18% improvement in travel time efficiency.
- Built cross-platform React Native mobile interfaces for drivers, parents, and administrators, integrated with a Django/PostGIS backend for geospatial data management, achieving 95% route accuracy and a System Usability Scale score of 84/100.

BeautyHub Platform – YMCA Institute

React.js, Next.js, HTML5, CSS3, REST APIs | github.com/YMCA-Comprehensive-Institute/beautyhubFrontend

- Designed and built a responsive beauty services platform with scalable React.js/Next.js components, translating Figma designs into pixel-accurate, mobile-first interfaces serving real customers.
- Integrated frontend components with backend APIs for service listings, bookings, and user profiles, delivering an accessible, high-performance user experience across all device sizes.

Turwa MICE Booking System – Innovation Village

Laravel, OAuth2, PostgreSQL, Swagger, Postman | github.com/Jewel-Naomi/Turwa-MICE

- Engineered a secure hotel bookings and events management platform with OAuth2-secured RESTful APIs, handling end-to-end booking flows, payment processing, and venue management for the MICE industry.
- Implemented semantic versioning (v1, v2) and produced comprehensive Swagger and Postman documentation, enabling the frontend team to integrate independently and maintaining clear API lifecycle management.

EDUCATION

Bachelor of Science in Software Engineering *2021 – 2025*

Makerere University, Kampala, Uganda

CERTIFICATIONS

- Workflow Specialist – Asana (2025)
- Code Queen Bootcamp in Web Development – Innovation Village (2023)
